1) Quick Test is a fast way to check the reliability of your CD-RW. It checks for write errors or corrupted files in the CD-RW. 2) Test CD-R is an advanced version of Quick Test. It checks all CD-RW's and CD-R's for readable errors. It checks the following: - Write error (where a block was written but not properly written to the CD-RW) - Write error on the first sector of a CD-RW - Read error (the block is read from the CD-RW and then reported) 3) CD-RW Auto Test does what Quick Test and Test CD-R do, but the difference is that it uses the drive's firmware to do all the hard work. The program works through the drive's firmware to check for errors in the current write operation. Most software applications for CD writing have the problem that the program can handle only one disc at a time. For example, your current write operation might be half completed, and this will cause the following problems: - You lose track of the previous CD or DVDs. - You are unable to program more than one disc at the same time. Existing CD-writing applications will only handle one disc at a time. Multi-disc software like CD-RW Auto Test can write two, three, four or more CDs simultaneously, and if one or more discs have errors the software will let you know immediately. No matter how many discs are written, Auto Test still remember where the previous CD or DVDs were, so you can continue with your current disc without worry. The Auto Test program is very efficient in use, while giving full control of all components. Auto Test follows the current write operations to both detect errors in the disc as well as the current write phase. In contrast, the CD-RW Auto Test program is very fast at detecting errors, but very slow at beginning the current write operation. In addition, Auto Test does only what it is designed to do: Auto Test of your write discs. Auto Test also has many options to allow you to check your disc for consistent check patterns, file write times, read error, blank error, bad sectors, read error rate and much more. There is no need to run any other program or app to find errors or corruption on the disc. Simply open the Auto Test program and let it do its magic! Furthermore, every

Launch the executable Test Path. Choose the source path. Choose the destination path, usually the CD-R's folder. Click the Start button to start the comparing. Choose the Compare option in the menu bar to view the results. Test Path Test Path stands out from the rest as being the first software package which enables you to check the files you write/burn on a new CD-R, although you can also check any two paths. From now on you can know for sure that all files that you wrote to the CD-R are there and without write errors. The program reads all the files in the source path and its sub-directories and then compares them with the files in the destination path. The program will then report the missing files in the destination path and report files with differences. Test Path can handle up to 500,000 files in the source path and destination path. Different comparing options, such as 'compare by file time' and 'do fast comparing' are also available. Test Path Source: The path where the files to be tested are located. Test Path Dest: The path where the files after the test are located. Test Path Options: If 'compare b7e8fdf5c8
